

Empower Decision Making and Boost Performance with Data Analytics

Improve financial results and increase efficiency with practice analytics that go beyond traditional dashboard and reporting tools.

Understanding your business performance requires a solid foundation in data. Lack of transparency into your practice data can be costly. Revenue growth potential may be lost. Operational inefficiencies may be left unchecked.

To manage your revenue cycle and operational performance, you need a **comprehensive, user-friendly data analytics** solution. One that provides transparency into your own practice data and makes it easy to establish benchmarks, measure performance, and derive actionable insights from that data.

NextGen® Financial and Operational Analytics is an easy-to use platform that provides the foundation in data needed to make decisions that foster stability, growth, and success. A dynamic interface gives you fast access to both financial and operational metrics—with visualizations that make it easy to identify trends and put analytics to use in your practice.

How it works

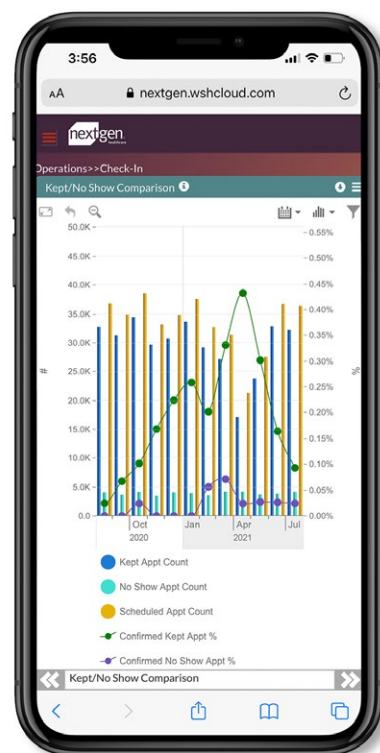

Benefit from automated data extraction. Proprietary data pump technology extracts data from NextGen® Enterprise PM. This data is then cleansed, adapted, and loaded into a unified database. The result: **powerful analytics for your business.**

Make analytics part of your practice

Monitor more than **100 critical key performance indicators (KPIs)** in one easy-to-use platform. **Financial analytics** enable you to view key metrics related to billing, payments, accounts receivable (A/R), denials, payor performance, and tasking. **Operational analytics** provide a window into the efficiency of appointment setting and patient check-in as well as marketing activities.

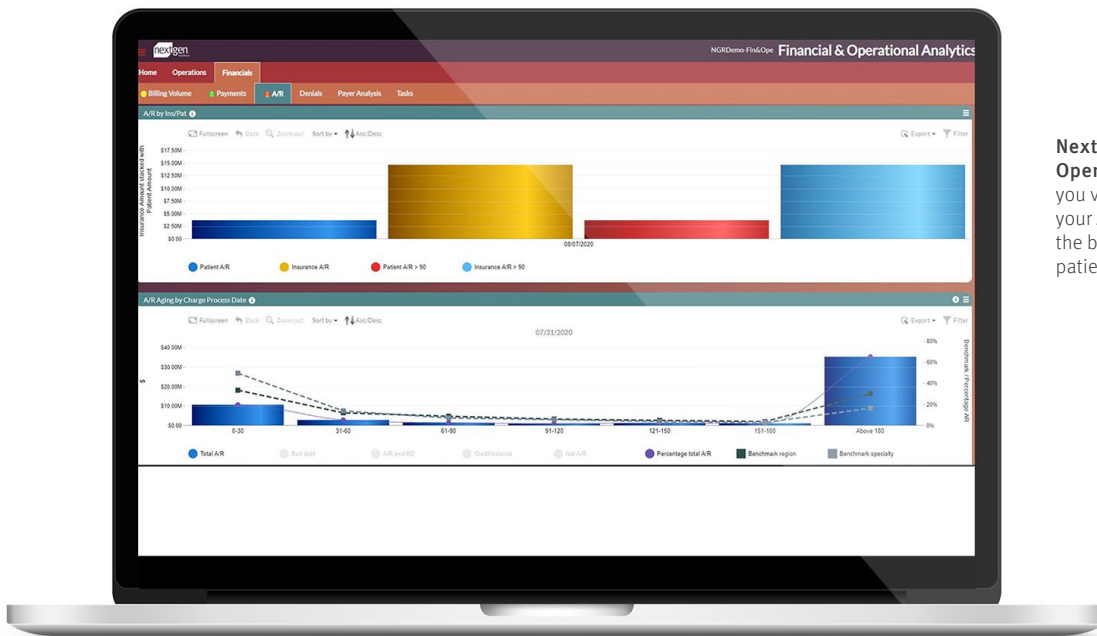

NextGen Financial and Operational Analytics delivers precise, clear information to help you improve financial outcomes, administrative processes, and quality measures. Use this solution to:

- Measure your practice's business performance using KPIs, benchmarking, and comparative analytics
- View financial and operational trends across your enterprise—with the ability to drill down to the transaction level
- Manage billing, A/R, and denials and help prevent future denials
- Analyze payment patterns from patients and third-party payors
- Manage cost and improve revenue
- Analyze the financial efficacy of telehealth implementation

The NextGen Financial and Operational Analytics app gives you access to practice analytics on your smartphone. This example shows a comparison of scheduled appointments, kept appointments, and no shows over time.

Days in A/R and breakdown of patient vs. insurance A/R

NextGen Financial and Operational Analytics helps you visualize the aging of your A/R. You can also see the breakdown between patient and insurance A/R.

Configurable, accessible, and easy to use

Derive actionable insights from your data

Use drill-down dashboards and filters to isolate and identify trends. Drill-down by time frame, location, provider, or other parameters. Bright graphics render trends clearly, making it much easier to find insights that can be put into action.

Meet specific needs of your practice

NextGen Financial and Operational Analytics is highly configurable. Adapt the user interface to the preferences of your staff. Implement role-based access for customized views for providers, administrators, and practice executives.

Access the solution easily

NextGen Financial and Operational Analytics is cloud-hosted. Access it with any web browser or an app on your tablet or smartphone. There's no need for software installation or costly hardware.

Stay up-to-date

Daily loads ensure access to data as recent as the previous day.

Get started quickly and easily

You'll find implementation is quick and easy. NextGen Healthcare manages all setup and support. There's little to no learning curve: A user-friendly interface eliminates the need for extensive training.
